AUDIENCE: Automotive Engine Remanufacturers

OMEGASONICS INTRODUCES NEW POWER PRO 4000 TO THE AUTOMOTIVE REMANUFACTURING INDUSTRY

Simi Valley, CA – Omegasonics has just announced the addition of the Omega® Power Pro 4000 to its line of ultrasonic parts cleaning systems. The Omega® Power Pro 4000 is specifically designed for the automotive remanufacturer and offers 4000 watts of ultrasonic cleaning power in a 45 gallon tank. Omega systems use safe, non-toxic soaps and ultrasound to remove carbon, oil, dirt and sludge from a variety of automotive parts such as cylinder heads, suspensions, pistons, compressor parts and aluminum components. Meeting all EPA standards, the new system eliminates dangerous, toxic solvent baths and time consuming hand labor.

Pays for itself in months. Compared to the conventional parts cleaning method of expensive toxic solvent sprays and costly hand cleaning, Omega systems can pay for themselves in as little as one year. Although savings will vary from user to user, typical material and labor savings generally exceed \$1,000.00 per month.

Special features maximize cleaning power and reduce costs. Using a combination of unique designs and features, the Omega series is economical to run and maintain. From sludge-resistant mounting of transducers that maintain ultrasound efficiency, to fully insulated tank bodies and non-immersion, silicone blanket heaters that reduce power costs, the new series is designed for years of trouble-free operation. Critical components are easily accessible and designed for user maintenance, eliminating costly service calls and down time.

For more information on Omega Power Pro 4000 ultrasonic parts washing system. Call Omegasonics at 1.800.669.8227 or email your request to omegasonics@omegasonics.com. Omegasonics designs and manufactures a complete line of ultrasonic fire restoration cleaning systems, biodegradable cleaning agents, supplies and accessories.
