OMEGASONICS DEMONSTRATING ULTRASONICS' ADVANTAGES AT EASTEC

*Leading west coast manufacturer of ultrasonic cleaning systems to present
products' time, financial and environmental benefits*

Simi Valley, CA – Omegasonics, the west coast's leading manufacturer of ultrasonic cleaning systems, will be exhibiting at EASTEC, May 23 to 25, 2006, at the Eastern States Exhibition Grounds, West Springfield, MA. Offering a comprehensive line of ultrasonic cleaning systems and engineered soaps, Omegasonics is creating the following benefits for industrial users across North America:

- Saving time and money through elimination of hand cleaning
- Ending the need for toxic solvents and cleaners
- Giving users superior results in their product quality and delivery schedules through quick, deep cleaning of intricate parts and assemblies onsite.

Omegasonics' ultrasonic cleaning systems range from the table top model 4075 with a one-half gallon capacity to the Power Pro 8000, a floor unit with a 110 gallon capacity and wheels for convenience in shop configuration. Omegasonics offers over 25 different engineered soaps, each formulated to remove a designated type of dirt, solvent, particle and/or contaminant while protecting the cleaned surface with special buffers.

“Omegasonics saves money and time by eliminating hand scrubbing and toxic solvents and cleaners,” said Frank Pedeflous of Omegasonics. “Our industrial customers are free to do other tasks while our systems clean their parts automatically. Customers also enjoy not having to deal with the costs and regulations regarding toxic cleaning products.”

Omegasonics will be at Booth 5717, Better Living Building (near the upper left-hand corner of the hall, away from the entrances). For more information about Omegasonics, call 800-669-8227 or visit www.omegasonics.com.

###

About Omegasonics:

Based in Simi Valley, CA, Omegasonics is the west coast’s leading manufacturer of ultrasonic cleaning systems. Omegasonics’ ultrasonic technology cleans parts with sound vibrations, hot water and chemically based soaps in place of traditional hand scrubbing and toxic solvents, resulting in time, financial and environmental benefits for end-users.
